

Hello,

My school does not provide any documents or forms regarding the particular internship. My internship will be validated if it includes a health-related laboratory study and a chemistry and/or biology component (includes genetics). The internship agreement will only be provided if there is a proposal.

I am really interested in your research within the CFF, I could see that you are doing studies in particular on the cheetah in genetics or virology or on diseases (Babesia, amyloidosis). Moreover, I also noticed that your studies were not only about the cheetah, but also about other wild animals (hyenas, caracal, elephant...). I would like to work on the health of wild animals and the CFF centre seems to correspond with my expectations.

I would also like to point out that the dates given are modifiable if necessary.
