Internship in Cheetah Conservation fund

To whom it may concern,

I have to carry out an internship as part of my last year of the University's Bachelor as a student studying biodiversity and animal behavior in Lyon (France).

I will be free from mid-January and until the end of June, or more if necessary, also know that I will be covered by an internship agreement from my University.

I have already come to your foundation in July 2018 as a visitor and on this occasion had discussed with interns from the center.

Since then, I have been more than motivated to join your team for the period of your choice. I did several internships on animal behavior such as mice and monkeys in some research laboratories in France (see my CV) and I myself traveled to many parks and reserves around the world to observe wildlife (Madagascar, Pentanal, Tanzania, Namibia ..).

I am extremely motivated to work on cheetahs in the Cheetah Conservation fund. During the visit to your center, I was very interested in the genetic problems of cheetahs which are explained there. I know this kind of problem having studied them.

I will be ready to help with any task in your center that you want to entrust to me, I can be available when you want for an interview if you wish.

Thank you for your concern and considering my request,

Best regards,

Jules
