

Hello,

We are three vet 3th year students, studying at the Ecole nationale vétérinaire d'Alfort(EnvA) (5 avenue du général de Gaulles, 94700 Maisons-Alfort, France). We wish to do a vet internship in a foreign country, for 4 weeks in july 2022. We have looked for different vet internships in order to work with wild animals and we discovered your conservation and research center. This one is the perfect opportunity for us, with professional learning and personal experience. We really want to discover fauna and flora.

The three of us are extremely motivated, listening and always volunteer, we will be ready to help you, to follow your advice to improve our technical gestures in order to make health care the best we can. Furthermore, we can feed the animals and help the caretakers. We can also help local people, (for the management or maintaining the stability of the reserve, for associated social projects, ...).

We have also joined you our Curriculum Vitae so you can check our different vet experiences. We have already completed several veterinary interships as well as vet assistant which allowed us to deepen our restraint techniques, basic care

Would you be willing to talk with us about this request for an internship with us ?

Wishing you a good day and thanking you for the time you spent to deal with our request.

Sincerely

Lefebvre Maxime,

Herivault Juliette,

Lopez Noémie
